DETAILED ACTION

Specification

1. The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter. See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction of the following is required: there is no antecedent basis for "a preprogrammed algorithm" as claimed in Claims 13 and 16; there is antecedent basis for the term "methodology or flow chart 70", found on the first line of paragraph [0030] the claims have been examined with the "preprogrammed algorithm" to be the methodology shown in Figure 2.

Claim Rejections - 35 USC § 112

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 7-12 are rejected under 35 U.S.C. 112, first paragraph, as failing to comply with the enablement requirement. The claim(s) contains subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention. In claim 7, no teaching was found for, "command the engine to rotate the motor, thereby increasing engine speed". The claim has been examined with -- command the motor to rotating the engine, thereby increasing engine speed--, as is believed to be applicant's intent.

Allowable Subject Matter

Claims 1-6 allowed.

Claims ⁷~~10~~-12 would be allowable if rewritten to overcome the rejection(s) under 35 U.S.C. 112, ^{first}~~second~~ paragraph, set forth in this Office action and to include all of the limitations of the base claim and any intervening claims.

Claims 13-18 are objected to as being dependent upon a specification rejection for failing to provide proper antecedent basis for the claimed subject matter (see paragraph 1 above), but would be allowable pending correction of the specification objection.

The following is a statement of reasons for the indication of allowable subject matter: the primary reason for the indication of allowable subject matter in this case is the inclusion of: a method for controlling a motor to start an engine based on a predetermined speed profile, the controller providing fuel to the engine when the engine reaches a target speed and providing fuel prior to the engine reaching the target speed when the engine starting profile does not match the predetermined ideal speed profile, in combination with the other elements recited, which is not found in the prior art of record.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

U.S. Patent No. 5,595,161 issued to Ott et al. teaches of a Device for controlling fuel injection.
